

# Military Classification and Marking Solutions for Email

Sharing of information is critical to national and international security. To enable effective and secure information sharing, military organizations have historically relied on classification markings. But without a tool to enforce classification and automate the application of markings, users apply markings inconsistently and incorrectly. This hinders information sharing, and increases the risk of data spillage and inadvertent disclosure.

Titus Message Classification™ is an easy-to-use classification & policy enforcement tool that ensures every Microsoft Outlook and Outlook Web Access email is classified and protectively marked before it is sent. The solution enables users to apply uniform, consistent, and comprehensive markings to emails – with little or no knowledge of regulatory marking standards. By ensuring properly marked emails, the solution helps to promote cross-domain sharing and reduce spillage of classified and sensitive information.

Military-compliant classifications in Outlook 2007

## Highlights

**Titus Message Classification is an email labeling solution for Microsoft Outlook® and Outlook Web Access® that can force users to select classifications before sending an email.**

Based on these labels, the software can:

- Apply consistent, standards-compliant visual markings
- Stop email spillage by automatically verifying recipients
- Checks attached documents to ensure email classification is the same or higher
- Generate metadata to enable information sharing through cross-domain guards

## Try it!

Request a free trial or view a demo at [www.titus.com/software/message-classification/message-classification-outlook.php](http://www.titus.com/software/message-classification/message-classification-outlook.php)

## System Requirements

Titus Message Classification works with Microsoft Outlook 2003, 2007, and 2010 and Microsoft Exchange® 2003, 2007, and 2010.

## Complementary Titus Products

Document Classification™ provides classification and labeling for Microsoft Office® Word®, Excel®, and PowerPoint® documents.

## Message Classification Features and Benefits - Military

Key Features	Benefits
Classification Selector	Prompts users to classify all emails, meeting requests, and tasks. Supports marking standards such as CAPCO, CUI, NATO, UK HMG Security Policy Framework, and the Australian Email Protective Marking standard.
Label Marker	Applies military-compliant visual markings in the email subject line and message body to clearly identify the sensitivity of the information.
Portion Marker	Applies classifications to individual portions of a document, and reflects the highest portion marking in the document's overall classification.
Metadata Generator	Creates metadata that can be used to reduce spillage of classified information.
Content Validation	Scans email and attached documents for sensitive content after the user clicks Send, and enables user remediation by highlighting potential problems within the message. One of the remediation options allows users to automatically redact sensitive content out of the email.
Policy Verifier	Prevents data spillage by examining email for policy violations before the email leaves the desktop. This feature ensures that sensitive or classified email is not sent to the wrong people or domains, and provides instant feedback so that the sender can correct any problems.
Security Enabler	Adds an extra layer of security by automatically encrypting, signing, or RMS-protecting sensitive emails. This optional feature requires S/MIME certificates or Microsoft Active Directory Rights Management Services®.
Administration	Enables organizations to centrally configure and deploy their classification labels and policies.
Logging and Reporting	Provides insight into policy violations and potential information leakage.

*Guided classification makes it easy for users to select the correct labels*

### About Titus

Titus is the leading provider of email, document and SharePoint classification software solutions to help organizations share information securely while meeting policy and compliance requirements. Our solutions enable military, government, and large enterprises to raise awareness and meet regulatory compliance by visually alerting end users to the sensitivity of information. Titus solutions are deployed to over 1.5 million users within our over 200 military, government and enterprise customers worldwide, including the United States Air Force, Dow Corning, NATO, Canadian Department of National Defence, Australian Department of Defence, and the U.S. Department of Veterans Affairs.
